

What is the Cloud?

Moving to the cloud has been a hot topic for businesses for more than ten years. But what exactly does it mean? What is the cloud? Where is your data stored?

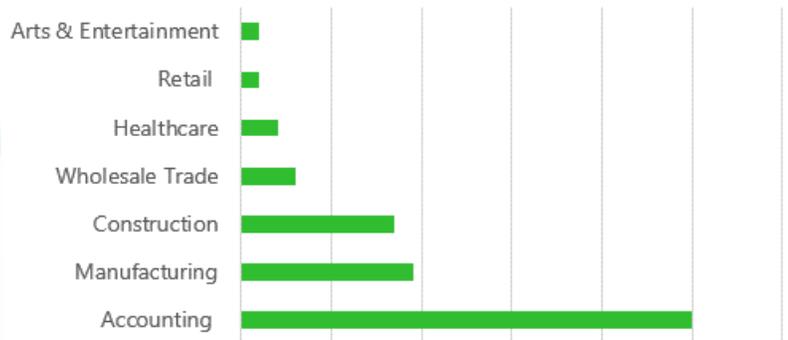

Contrary to popular belief, your data isn't in those fluffy white things in the sky. It's stored somewhere, on the ground, allowing a network of servers to find what you need and make it readily available, anytime, anywhere.

The cloud refers to software and services that run on the internet, instead of locally on your computer. The cloud may sound complicated and difficult, but in reality, most are already using it in the form of Apple's iCloud, Google Drive, Dropbox, Netflix, etc. The cloud is all around us. By adopting this technology now, you can prepare to remain competitive in your marketplace for the years to come.

As time goes on, more industries are leveraging cloud technology to make their business more flexible, collaborative, and efficient.

The Cloud gives you the ability to log on anytime, anywhere and pick up where you left off last. If you utilize an accountant or bookkeeping service for your business, they will no longer need to take up your time to manage your books. They can log in and access your data remotely and in real time. You'll find the cloud makes better use of company resources and ultimately saves you time, money, and worry.
